Dear EPA Team,

I am a regular user of the Willamette river for kayaking and use the entire river although I worry about using the harbor section. I am very interested in seeing the river returned to a safe condition sooner rather than later. The fact that the fish are so contaminated that there are limits on how frequently they can be eaten is alarming. Waiting a generation to see if the fish are safe for eating is unacceptable. I urge you to remove more of the contaminated river silt to speed up the recovery of the river and make this section of the river part of the Portland and not leave it as toxic sewer for the indefinite future. The plan should give definite goals for when fish should be safe to consume.
